AI Engineer specialized in Agentic AI and LLMs, with hands-on experience designing multi-agent systems (LangChain, LangGraph), Retrieval-Augmented Generation (RAG) pipelines, and deploying models via Azure AI Foundry. Holder of a Master's degree in Artificial Intelligence, I have built high-impact AI solutions in a professional environment — including an IT chatbot that reduced request processing time by 83%. I'm looking to join an innovative team to design and deploy ambitious AI solutions.

Technical skills:

- **LLM / Agentic AI:** LangChain · LangGraph · Azure AI Foundry · Azure OpenAI Service · GPT-4o · LLaMA 3 · Mistral 7B · Gemini · RAG · Qdrant · Prompt Engineering · Multi-agent Systems · Chainlit
- **Cloud & DevOps:** Azure · Docker · FastAPI · MLOps
- **Development:** React.js · Laravel · REST API · Git · .NET · SSO

Professional experience:

- **AI Developer / Agentic AI Engineer – JESA : 06/16/2025 – Present**
 - Designed a multi-agent chatbot with LangChain & LangGraph to automate IT ticket management and creation on ManageEngine, integrated and deployed on Microsoft Teams as the primary user interface.
 - Built AI agents to assist users and automate IT request processing end-to-end.
 - Implemented a RAG system to deliver solutions from an internal knowledge base.
 - Developed a .NET platform to centralize and track weekly reports, using AI to auto-summarize weekly, monthly, quarterly, and yearly reports and consolidate them into unified insights.
 - Contributed to the JESA Value Creation Application (JVCA): a web platform to submit, estimate, and track optimization ideas across economic savings, sustainability (CO₂, water), schedule, and employee life-quality impact — with multi-level approval workflows (PM, client).
 - Implemented AI-powered similar-idea detection to flag duplicate or related proposals for the same project, improving review quality and capitalizing on past ideas.
 - Integrated cloud services and AI models to automate report synthesis and improve user experience.
 - Collaborated with technical and business teams to design and optimize AI solutions.
- Freelance on the **Outlier** platform from 01/30/2025 – 06/16/2025 — Team Lead and Reviewer: improving Python and JavaScript solutions for code-generation problems, reasoning, test reasoning, and refactoring problem prompts and responses that surpass the best LLMs and push beyond the state of the art.
- Training Programme: 09/24/2024 to 12/24/2024, **CloudsCockpit** (Data Scientist)
 - *Project: Development of a multi-agent system with cloud deployment (from 09/25/2024 to 01/01/2025)*
 - Designed and developed a multi-agent system with LangChain and LangGraph within a complete MLOps pipeline.
 - Implemented a Retrieval-Augmented Generation (RAG) pipeline integrating search tools: Tavily, Google Search, and SerpAPI.
 - Used OpenAI and Gemini LLMs for agent orchestration and reasoning.
 - Developed FastAPI endpoints to expose the agents and deployed them on AWS ECS with scalability management.
 - Containerized the agents with Docker to ensure consistency across environments.
 - Securely stored conversation history in AWS RDS.
- Internship: 09/01/2024 to 09/30/2024, **GEOAP** (Data Scientist)
 - *Project: Chatbot development with LLMs*

I built a chatbot using LLMs such as Mistral 7B and LLaMA 3. I focused my work on model deployment and integrating AI with Docker and Ollama for local execution. I explored LangChain to build scalable chatbots and improve Natural Language Processing (NLP) workflows. I solved issues related to memory management and resource allocation while optimizing model performance.

- **Skills:** Python, Docker, LangChain, Mistral 7B, LLaMA 3, OpenUI, Machine Learning, NLP, Chatbot development, Model deployment
- End-of-year project (PFE): February 2024 to June 2024, **CloudLink, Marrakech**
 - Automated the process of launching email marketing campaigns using the Vertex AI API and Robomotion.
 - Participated in the design phase of a SaaS for rules management.

- Optimized and customized the Mistral 7B model and integrated it into an application to generate a graph from a prompt using Graphviz and the Mistral 7B model.
- Internship (PFA): June 15, 2023 to August 15, 2023, **AliDanTek**
 - Data preprocessing.
 - Developed classification and regression models.
 - Improved models to achieve better accuracy.
 - Built a user interface with React.js.
- End-of-year project (PFE): April 2022 to July 2022, **YesToTheNet, Marrakech**
 - Developed a web application for contact management using Laravel 9 and Bootstrap 5.

Education

<u>Master's degree</u> <i>FST Marrakech: Artificial Intelligence and Computer Engineering.</i>	2024
<u>Bachelor's degree</u> <i>FST Marrakech: SIR - Distributed Computer Systems.</i>	2022
Baccalaureate - <i>BAC experimental science, honors.</i>	2018

Certificates

• Advanced Learning Algorithms	2023
• Exploratory Data Analysis for Machine Learning (IBM Certificate)	2023
• Technical Support Fundamentals (Google)	2023
• Introduction to Generative AI	2023

Soft skills

- Adaptability, Time management, Communication and collaboration, Critical thinking

Languages

French: Fluent
 English: Fluent
 Arabic: Native language

Areas of interest

Sports, Reading, Programming
